About DMXzone CSS3 Drop Shadows

The **DMXzone CSS3 Drop Shadows** is built with CSS3 and takes full advantage of the new CSS3 properties to make great looking, image less, shadows. With the extension you create a container to which you can add different shadow effects on and fill it with other content elements like headings, text, tables, images and more.

You can choose from several types of shadows such as **curved**, **perspective**, **curled**, **lifted** and **raised**. Set the side for the shadows, **rotation degree** and add an **inset shadow**. Changing the background color and setting the width and height of the

element is very easy. All this is greatly presented in the Dreamweaver design view.

Features in Detail

• Add shadows to any page element - You can add awesome CSS3 shadows to any page element, including text, table, image and more...

300 x 200	Heading Cras justo odio, dapibus ac facilisis in, egestas eget quam. Donec id elit non mi porta gravida at eget metus. Nullam id dolor id nibh ultricies vehicula ut id elit. Action Action		30	0 x 200)

Content of the amxCSS3DropSnadows2 av goes here.

• Full cross browser unobtrusive CSS3 support - The shadows are supported by any modern browser, including IE9 but won't be displayed where not supported.

Before you begin

Make sure to setup your site in Dreamweaver first before creating a page. If you don't know how to do that please <u>read this</u>.

Installing the extension

Read the tutorial at http://www.dmxzone.com/go/4671/how-to-install-extensions-from-dmxzone/

Login, download the product, and look up your serial at http://www.dmxzone.com/user/products

Get the latest extension manager from Adobe at http://www.adobe.com/exchange/em_download/

Open the .mxp file (the extension manager should start-up) and install the extension.

If you experience any problems contact our Live Support!

The Basics: Basic Usage of DMXzone CSS3 Drop Shadows

In this tutorial we will show you how to use **DMXzone CSS3 Drop Shadows** and the features packed in it. *You can also check out the <u>video</u>.

How to do it

1. We've already added a container to our page and now we're going to apply a shadow to it.
