About DMXzone Ajax Form

Reduce page flickering, minimize the load time, and get response immediately after submission with **DMXzone Ajax Form**! Submit any form and retrieve the result on the same page quick and easy, enhancing the user experience. This amazing Dreamweaver extension relies on Ajax technology providing fast load for the response inside the current page without the need to refresh. From simple form submission like contacts to more advanced forms that process values through a database and retrieve the result back, everything is possible.

Show a product detail page inline within an index page! Create pages with dropdown menus to filter and load the content on the same page, load different galleries or any other dynamic content. After submission you can choose one of the two predefined status messages (error and success) or just customize them through the CSS. Pick up a custom element to show after submission or a specific part of the page.

With the Behavior Connector you can combine the DMXzone Ajax Form with other extensions like <u>DMXzone</u> Lightbox, <u>Universal Form Validator ASP/PHP</u>, <u>HTML5 MP3 Player</u>, <u>Advanced Tooltips</u> and many more.

Features in Detail

• Ajax form submission - Submit any form through ajax and show custom success or failure area inline without any page refresh!

Select a team member	•	Use this form in order to
Your name		contact any of our team
Your email		members!
Your question		

• Index/detail page in one - Show a product detail page inline in the same page as the index!

• Load dynamic galleries - Show an index of available galleries and load the chosen one inline!

• Dynamic dependent drop downs or other content - Create a separate page with a drop down control that is filtered and loaded inline with DMXzone Ajax Form.

• Fully editable status sections - You can choose between two predefined success and error messages that are shown upon form submission. Both can be customized through the CSS.

	Column 'name' cannot be null
	Thank you!

	Send

 Full support for the DMXzone Behavior Connector - You can bind other DMXzone extensions through the Behavior Connector. When a form is successfully submitted custom action behavior is triggered or other extensions are controlled. For example you can open the response in an <u>Advanced Tooltips</u>.

• **Fully controllable by behaviors** - Choose which element to submit your form and control different sections (Form, Error and Success) with one of the following actions - toggle, show and hide.

Control DMXzone Ajax	Form	×
DMXzone Ajax Form: Action: Element:	htmlform	OK Cancel
Control DMXzone Aja	x Form	×
DMXzone Ajax Form: Action: Element:	htmlform toggle Form Region	OK Cancel

• Great Dreamweaver design preview - You can preview your forms directly in Dreamweaver and see how they look like.

Before you begin

Make sure to setup your site in Dreamweaver first before creating a page. If you don't know how to do that please <u>read this</u>.

Installing the extension

Read the tutorial at http://www.dmxzone.com/go/4671/how-to-install-extensions-from-dmxzone/

Login, download the product, and look up your serial at http://www.dmxzone.com/user/products

Get the latest extension manager from Adobe at http://www.adobe.com/exchange/em_download/

Open the .mxp file (the extension manager should start-up) and install the extension.

If you experience any problems contact our Live Support!

The Basics: Basic Usage of DMXzone Ajax Form

In this tutorial we will show you how to use the <u>DMXzone Ajax Form</u> and the basic features packed in it. *You can also check out the <u>video</u>.

4. In the **Get Response field** enter the ID of the HTML element that holds the **thank you message**. On our page this Div has an ID **#thankyou**.

*Note: If you have an Action page set, you can:

Use the Get Response field with an HTML element that has an #id from it.
 Leave the Get Response field empty in order to show the whole action page into the Set Target Div.

Advanced: Load Dynamic Galleries on Demand

In this tutorial we will show you how to load dynamic galleries inline on demand using <u>DMXzone Ajax Form</u>. *You can also check out the <u>video</u>.

Nature	-
Choose a gallery	
Animals	
Nature	
Urban	

How to do it

1. We already created 2 pages – an **Index page**, where we will place the Gallery Type menu and a **Gallery page** that contains dynamic images from a recordset.

2. In the DMXzone Behaviors connector window, select when the form is successfully submitted (1), choose open DMXzone Lightbox (2) and add the selected behavior (3).

3. In the Open DMXzone Lightbox window, click the browse button (1) and select the page that contains the thank you message (2). You can also customize the DMXzone Lightbox appearance.

4. Now you can save your work and preview the results in your browser.
